

MegaTorr[®] PS7-PD Hydrogen Gas Purifiers

Efficient bulk gas removal of H₂O, O₂, CO, CO₂, THC, N₂, He, and Ar impurities

The MegaTorr[®] PS7-PD Series palladium hydrogen gas purifiers are enhanced, optimized designs providing sub-ppb performance in compact footprints.

Entegris has drawn on years of experience in ultra-high purity (UHP) piping design, advanced process material analysis, and state-of-the-art integrated control systems to develop this family of purifiers to meet the needs of low capital cost, high reliability, and high performance.

Optimized design with flow rates up to 2,170 slpm

APPLICATIONS

- Semiconductor
- Data storage
- Flat panel display
- LED
- Solar

FEATURES & BENEFITS

Micro-channel palladium membrane	Produces the purest hydrogen on the planet by allowing only hydrogen to pass through while all other impurities travel out the bleed line
	Provides a solid barrier with no breakthrough as compared to catalysts and getters that rely on chemical reactions on the reactive surface
Optimized design	Provides sub-ppb performance in small footprints with flow rates up to 2,170 slpm (130 Nm ³ /hr)
Three platforms available	Models PS7-PD05, PS7-PD1, and PS7-PD2 have various flow capabilities to suit any application
