

PDMPak[®] Bottle System for Pressurized Applications

*Liner-based bottle system for
critical material delivery*

The PDMPak[®] system for pressurized applications is a leading containment and dispense system that helps ensure that chemicals are protected throughout the filling, shipping and dispensing operations. The system includes a container which consists of a flexible liner inside a rigid overpack, a package closure and a dispense connector.

APPLICATIONS

- PDMPak systems are designed for applications that require indirect pressurization during the dispense process. Pressure delivery gas flows through the dispense connector into the region between the bottle and the liner, causing compression, collapsing the liner and delivering chemical.

FEATURES & BENEFITS

- Designed to meet rigorous chemical input pressure requirements
- Makes pumps more efficient by maintaining positive pressure to the inlet of the pump
- Shatter-resistant bottle helps improve safety
- Indirect pressure with its sealed delivery system ensures safe chemical delivery and helps prevent external contamination
- Liner-based system maximizes chemical utilization

SPECIFICATIONS

Rated capacity	PK-01-A4-T420-1 1-liter PK-04-A4-T420-1 4-liter												
	DO NOT overfill. There is a designed overhead capacity to accommodate the dispense system. The actual capacity should be used when filling the PDMPak to avoid process problems and potential overflows.												
Nominal weight of assembly (including temporary cap*)	1-liter 0.29 kg (0.63 lb) 4-liter 0.76 kg (1.68 lb)												
UV protection	Less than 0.1% light transmittance at 190–400 nm wavelength												
United Nations classification	A combination package with Entegris specified shipping box (Certified UN4G/Y: 4-liter size only)												
Overpack neck thread type	Modified 63 mm buttress thread; 4.24 mm (0.167") pitch												
Pressure dispense rating	The PDMPak is a pressure rated vessel. Maximum operating pressure: 1 atm gauge pressure (14.7 psig, 101.4 kPa)												
Country of manufacture	USA

SHIPPING INFORMATION

Labeling	A liner barcode label showing the assembly part number, bottling batch number, and liner lot number is applied to the bottom surface of the overpack. The outer shipping box is labeled with part number, product description, bottle batch number, liner lot number(s), quantity and date of manufacture.
Packaging	PDMPak bottles are double-wrapped in a polyethylene bag and closed with a cable tie. The double-wrapped PDMPak bottles are placed into a shipping box made of corrugated fiberboard.
