Sentry® QCIII Quick Connect System

The cleanest, safest, most user-friendly connection system available for high-purity bulk chemical dispense.
Materials Integrity Management

For nearly 40 years, Entegris—the industry experts for materials integrity management solutions—has been committed to purifying, protecting and transporting the critical materials that enable the world’s leading technologies. Materials integrity management starts with the chemicals that come into direct contact with every wafer and IC produced. To help you safely handle these high-purity, microelectronic-grade chemicals, Entegris offers the Sentry® QCIII quick connect system—a reliable means for filling containers or connecting a bulk chemical source to the chemical dispense unit.

Sentry QCIII Quick Connect Systems

Entegris introduced our first patented Quick Connect System over 20 years ago and our system remains the industry standard for high-purity chemical dispense. Expanding on the proven performance and functionality of this quick connect system, the Sentry QCIII quick connect system is today’s safest and easiest method of connecting chemical containers with typical bulk chemical delivery systems. This patented connection system comprises a key coded dispense head (DH) and drum insert (DI) that self align. Simply rotating the retaining ring pulls the DH and DI together so no visual line of site is required to make the connection—simplifying the assembly process significantly.

The Sentry QCIII quick connect system is designed for use with FluoroPure® chemical containers including HDPE transport drums, PFA composite drums, pressure vessels and intermediate bulk containers.

O-ring Free Main Dispense Seal

The main chemical dispense line utilizes Entegris’ industry leading Flaretek® sealing technology, which provides a leak-free, secure connection without o-rings. This sealing technology decreases your cost of ownership by eliminating the need for o-ring replacement and maintenance while minimizing downtime.

The Sentry QCIII quick connect system is available with a 3-port or 4-port dispense head and a drum insert of either PFA or polyethylene material.
Recirculation and Dispense in One

Designing four ports into the system enables recirculation and dispense operations in one connection. This eliminates the need for an independent recirculation dispense head and drum insert. The single DI connection assembles faster, requires less labor, reduces maintenance and thus lowers your costs.

1. ¾" fill and dispense port allows higher flow in either filling or dispense applications
2. ½" vent port allows proper ventilation during chemical dispense operations
3. ¼" connection verification port ensures proper DH/DI engagement prior to initial dispense operations if OEM equipment is equipped with this feature
4. Optional ¾" recirculation port allows chemical recirculation; an optional diffuser, which reduces chemical agitation and foaming typical with chemicals containing surfactants

Higher Flow Rates

Entegris’ innovative dispense head optimizes the flow path to allow chemical dispense at 1.5x the flow rate of standard quick connect systems. This larger flow volume increases the overall capacity of your bulk chemical dispense system, reducing recirculation time and increasing process efficiency.

Easy Product Traceability

Permanent serialized laser marking on the dispense head, drum insert and ID tag allow for easy product identification and traceability.

Both the dispense head and drum insert are laser marked, allowing quick, visual identification. Permanent serialized laser marking is nonintrusive and noncontaminating. Laser marking allows for 100% traceability to a production date and production inspection record.

Assembly

Dispense Head Assembly Cross Sectional View

NOTES:
- The ¼" Flaretek verification port is not shown due to cutaway view
- Due to the large quantity of key coded options, drum inserts are key coded per customer order

Port Options

Optional ¾" Flaretek recirculation port
½" Flaretek vent port
¾" Flaretek fill and dispense port
¼" Flaretek connection verification port
Key Codes

The Sentry quick connect system is the industry standard for interfacing FluoroPure® containers with bulk chemical delivery systems safely and conveniently. Entegris’ patented quick connect system is key coded to assure against unsafe chemical mixing while guaranteeing dedicated clean service. One connection provides dispensing, recirculation, venting and connection verification.

Entegris’ patented quick connect system is key-coded to assure against unsafe chemical mixing.

A series of seven tabs/slots are used to make up each chemical code.

Specifications

| Materials of construction: | Dispense head | Wetted parts include PFA, FEP and Kalrez® 4001 materials/Kalrez 6221 for Life Sciences applications |
|                          |              | Nonwetted parts are PFA and polyethylene |
| Drum insert              | Wetted parts are PFA or polyethylene with FEP encapsulated o-rings |
|                          | Nonwetted parts are polyethylene. Nut materials are PFA, PVDF and CFFA |
| Operating conditions:    | Maximum pressure | 207 kPa (30 psig) @ 77°F (25°C) |
| Regulatory:              | All internal wetted surfaces are made from resins that comply with FDA regulation 21 CFR 177.1550 or 21 CFR 177.2600 for use as articles or components of articles intended to contact food. Representative samples of these resins have been tested for biocompatibility in accordance with USP protocol and all meet the requirements of a USP Class VI (121°C) plastic. These resins also do not use any animal derived materials as intentional components. |
Ordering Information

FluoroPure Drum Inserts

Part Number

Di3

Special Instructions
00 = Standard angle cut on DIP tube
01 = No angle cut on DIP tube

DI Tracking Tag
0 = Standard serial number tag
1 = No tag
2 = RF enabled
3 = Special instructions

O-ring Material (Shipping Cap)
0 = FEP encapsulated silicone
1 = FEP encapsulated Viton®
2 = FEP encapsulated EPDM

Shipping Cap
0 = Standard
3 = Manual relief
6 = Vented (H₂O₂)

Chemical Key Code
Reference the Fluid Handling Systems catalog for chemical codes.

Drum Insert Length
01 = 55 gallon FluoroPure PFA composite drum
02 = 30 gallon FluoroPure PFA composite drum
03 = 15 gallon FluoroPure PFA composite drum
07 = 100 liter FluoroPure pressure vessel
08 = 20 liter FluoroPure pressure vessel
11 = 1000 liter FluoroPure PE IBC
28 = 5 gallon FluoroPure PFA lined pail
29 = 55 gallon FluoroPure HDPE drum
49 = 500 liter FluoroPure PE or PFA IBC
50 = 800 liter FluoroPure PE or PFA IBC
51 = 1200 liter FluoroPure PE or PFA IBC
53 = 175 liter FluoroPure PE/PE or PE/PFA composite drum
66 = 500 liter FluoroPure PE high-pressure IBC
67 = 800 liter FluoroPure PE high-pressure IBC
68 = 1200 liter FluoroPure PE high-pressure IBC
XX = Contact the factory for additional assignments

Number of Ports
3 = Standard
4 = Includes recirculation diffuser

Material of Construction
P = Polyethylene
T = PFA

Model
Di3 = QCIII drum insert
## Ordering Information

### FluoroPure Dispense Heads

**Part Number**  
DH3

**Nut Material**  
- 0 = FEP encapsulated silicone  
- 1 = FEP encapsulated Viton®  
- 2 = FEP encapsulated EPDM

**Length of Tubing (Feet) to be Attached to Head**  
00 = No tubing to be supplied

**O-ring Material**  
- 0 = FEP encapsulated silicone  
- 1 = FEP encapsulated Viton®  
- 2 = FEP encapsulated EPDM

**Chemical Key Code**  
Reference the Fluid Handling Systems catalog for chemical codes.

**Number of Ports**  
- 3 = Standard  
- 4 = Includes recirculation

**Model**  
DH3 = QCIII drum insert

**Special Instructions**  
- 00 = Standard  
- 01 = Dispense port without check valve  
- 02 = Recirculation port without check valve  
- 03 = No check valve in either dispense port or recirculation port

Note: Part number DH3X XXX 00 XXX would be a dispense head with no tubing supplied. When this is requested, the dispense head will be shipped with the splashguard assembly.

### FluoroPure Dispense Heads – Life Science

**Part Number**  
01-1019894-

**Number of Ports**  
- 3 = Standard  
- 4 = Includes recirculation

**Chemical Key Code**  
Reference the Fluid Handling Systems catalog for chemical codes.

Note:  
Standard options include:  
- FEP encapsulated silicon o-ring  
- PFA nut material  
- No tubing  

Please contact Entegris if other options are necessary.
