

Korea Technology Center

New 12,000 square meter facility opens in Ansan, Gyeonggi-do, strengthening Entegris' presence in Korea and advancing local innovation in semiconductor manufacturing

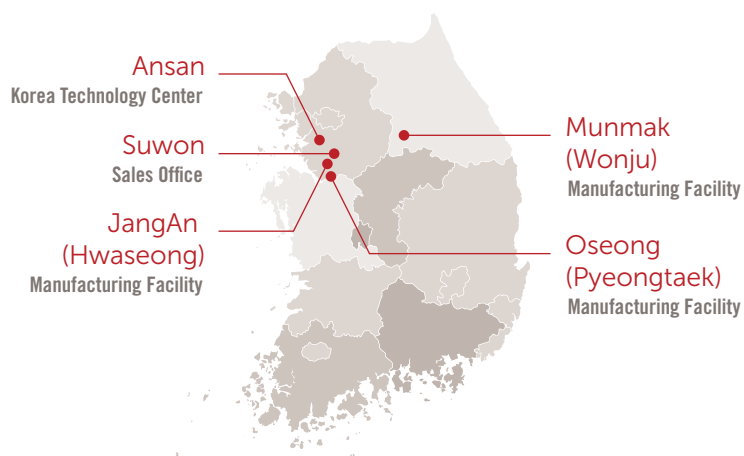

- Korea Technology Center (KTC) serves over 20 global and local customers
- Facility capabilities include research and development (R&D), analytical and application support for advanced deposition materials and wet chemicals, chemical mechanical planarization (CMP) process demonstration in a class 10 cleanroom, and analytical and application support for liquid filtration/purification
- In the near future, KTC will also be capable of CMP slurry R&D, application of Entegris solid precursors delivery system, wet chemical monitoring, and particle characterization
- The facility has a wastewater recycling system to conserve water and reduce wastewater

“The Korea Technology Center is key to our strategy of bringing our best capabilities even closer to our customers, further supporting the specialized needs of customers in Korea.”

– James A. O'Neill, Ph.D., SVP, and CTO

State-of-the-art technology center, manufacturing, and customer support in Korea

Committed to talent cultivation in Korea

- Scholarship for students in science, technology, engineering, and mathematics (STEM) fields
- Summer Internship Program
- 12-month Entegris Leadership Development Program for fresh graduates

About Entegris

A leading supplier of advanced materials and process solutions for the semiconductor, life sciences, and other high-tech industries.
